

After reviewing that available data pertaining to the Broadband over Power Line (BPL) issue, I am convinced that this technology will have very detrimental consequences on amateur and shortwave radio.

There are at least three other technologies by which broadband internet is available. While I do not wish to reduce competition in this area, I do believe that the effects on radio communications are too great to ignore.

As an amateur radio operator and shortwave radio listener, I am firmly against the implementation of BPL technology.
